Articulation IV: R, S, L, Th

*Initial, Medial, and Final Sounds and
Consonant Clusters for Selected Consonants*

Articulation

Therapy for Oral Apraxia,
Dysarthria, Vocabulary, Naming

Clicking on the *Word* button says the word; the *Sounds* button models sound segmentation; the *Phrase* button says a phrase containing the word; the *Sentence* button says a sentence relating to the picture; and the *Exaggerated* button says the word with the target sound exaggerated. Listen to the target. Record and

play back your voice. Then score your production as correct, distorted, or incorrect and practice some more. *Artic I* has 1,320 words in voiced/voiceless phoneme pairs. *Artic II* has 766 clusters contain-

ing l, r, s, t, and d. *Artic III* has 572 photographs in 76 categories to provide attention grabbing stimuli for articulating /r/.

Use captivating photographs with the target word in a natural context for your articulation therapy.

Articulation I: Consonant Phonemes,
Articulation II: Consonant Clusters, and
Articulation III: Vowels + R and R Clusters
are \$49 each.

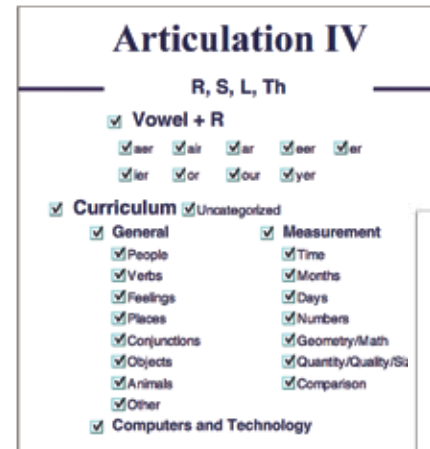

Articulation IV: R, S, L, Th

475 words for Articulation therapy!

Articulation IV: R, S, L, Th is the newest title in our Articulation series. It focuses on four of the most common articulation targets in the Initial, Medial, and Final positions and in Consonant Clusters. Sort the words by target sound and position and by curriculum area.

Groups include: Computer-related words, Measurement words, and School-related words.

New vocabulary includes words not commonly found

in yesterday's word lists but necessary for today's classroom success: compost, awesome,

e-mail address, LOL, USB port, browser, search engine, server, etc. Sort the words by target sound and position and by curriculum area.

Visit our website to
demo the game!

Articulation IV: R, S, L, Th is \$49.
Save money with the Artic Combo—only \$189.

Artic Games and More

550 Words for Articulation and Phonology

Artic Games and More allows you to tailor each session to the needs of your client. Start by choosing a focus: *Articulation*,

Phonology, *Content*, or *It's a...*

The *Articulation* focus is organized by phoneme and cluster and presents words, phrases, sounds, and sentences.

The *Phonology* focus is organized by speech pattern and is designed to elicit a large number

of productions of the target patterns. The *Content* focus is designed for clients with fund of knowledge issues. The *It's a...* focus provides cueing for clients with Aphasia and Apraxia. After choosing a focus, select a word list for the session and pick one of the eight games to start your lesson.

Artic Games - Just R, S, L

CDs focus on just one letter.

Each CD contains the *Word Practice* and *What's Different* games and lets the child practice words, sounds, phrases, sentences, questions, answers, and carrier phrases.

Therapy was never so easy!

Artic Games and More is \$49 and the one letter games, Just R, Just S, and Just L are "just" \$9 each.

Phonology

Two CDs for Phonological Process Therapy

Phonology I is a structured therapy based on Hodson's Phonological approach. The colorful drawings are simple and clear without extraneous distractions.

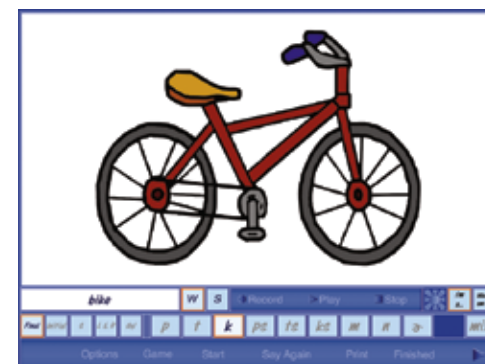

Phonology II has exercises with a whimsical element, while focusing on eliciting repetitions. Clients pop bubbles, help a bulldozer do its work, fill a pond with lily pads, catch fish,

grab flying objects as two

clowns juggle them, and help a bear locate his honey jars. And all the while they practice their target phonological patterns. These games are based on the Phonological approach to remediating unintelligible speech.

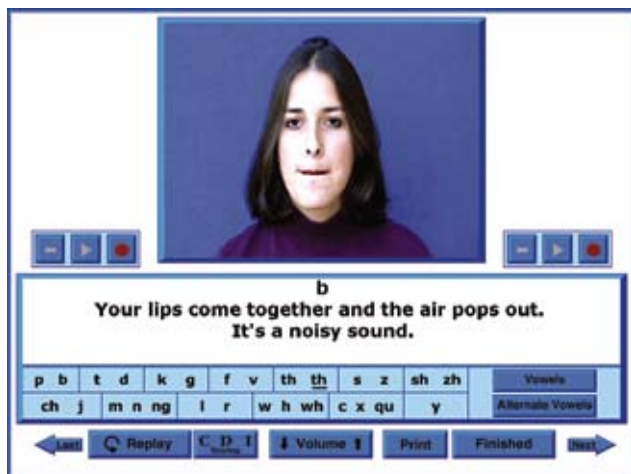

Target patterns are: final consonants; initial consonants; initial S clusters; initial L and R clusters; and two and three syllable words. Clients develop receptive and expressive reading readiness skills and improve speech production.

Phonology I and II are \$49 each. Have "phun" with both for \$89.

Systematic, Direct Instruction That Meets NCLB Standards

Phonemic Awareness has seven stimulating exercises that provide the basics of phoneme recognition and production, sound to symbol correlation, sound segmentation, blending, and syllable segmentation.

In *Rules, Rules, Rules!* students learn the basic rules for reading and spelling by identifying the vowel sound in a word, sounding out the word, and identifying the rule.

“Spelling Test on Friday!” teaches a six-step process—look, listen, say, listen, spell, check—for accurate spelling. Words range from K-8th grade level.

Literacy: Phonemic Awareness is \$49.
The companion CDs *Rules, Rules, Rules!*
and *“Spelling Test on Friday!”* are \$29 each.
Save with the 3-CD set for just \$99.

Appearances can be *Deceiving* Practice Visual Discrimination

Appearances Can Be Deceiving is a game to practice “seeing” based on the figure-ground relationship of letters, letter pairs, and words. The targets and foils range in difficulty from single letters to typical vocabulary, spelling, and reading words from elementary school to college; and challenge words from a variety of disciplines.

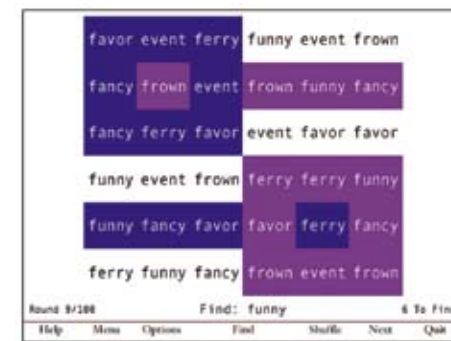

What is a Figure-Ground Relationship?

Figure is the space occupied by the letters (the black ez). The ground is the space surrounding the letters.

Practice “seeing” the target in progressively more challenging situations. Choose from 12 fonts—all lower case, all upper case, uppercase initial letter of word, and random—most similar to reading text.

Customize the background with colors and patterns. Loads of options to customize sessions for each individual’s skill level.

Visit our website to demo the game!

Appearances can be Deceiving is \$49.

Language

The language titles cover a wide range of issues faced by children with language delay, PDD, Autism, and Asperger Syndrome. They are also fun for all children learning language.

Speech Visualization

An Easy to Use Spectral Speech Tool

Speech Visualization is an easy to use spectral speech tool that allows real-time viewing of speech; visual comparison between speech models; analysis of the voice sample using common terminology; and simplified record keeping.

You can edit the progress reports in any text editor, then print, or save for your records.

Appropriate for individuals with: Voice Disorders, Cleft Palate, Dysfluencies, Deafness, Hard of Hearing, Cochlear

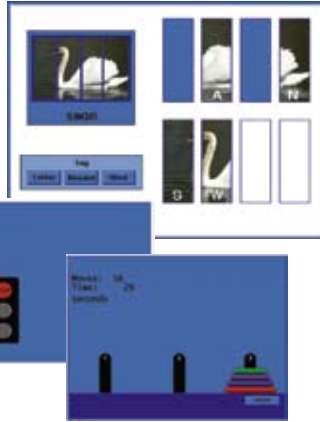

Implants, Dialect Differences, Articulation Disorders, Parkinson Disease, Traumatic Brain Injury, Dysarthria, Apraxia, Asperger Syndrome, Prosodic Speech disorders, Down Syndrome, and Age-related Voice changes.

Speech Visualization with Client Manager is \$99.

Attention

Comprehensive Therapy for Attention and Memory Deficits

Attention and Memory: Volume I was designed to treat attention and memory deficits from a variety of causes. All of the activities are appropriate for children (as young as pre-K) and adults, depending on the starting point and treatment goals.

The *High Level Attention Module* of *Attention and Memory: Volume I* is the core group of exercises in our program for remediation of attention deficits due to attention deficit disorder, traumatic brain injury, and stroke.

High Level Attention is available separately.

Attention and Memory: Volume II has eight auditory and visual exercises for functional memory tasks that progress from simple sustained attention to alternating and divided attention with response delays and auditory distractors.

A clinician's page lets you tailor each exercise to address each client's specific memory needs.

Attention and Memory: Volume I and Volume II are each \$59.
